Art Unit: 2874

This Office action is responsive to applicant's amendment submitted by Certificate of Mailing on May 12, 2003. The amendment has obviated the previously applied objection to the claims, as well as the previously applied rejection based upon the second paragraph of 35 U.S.C. § 112.

The single sheet of drawing filed on May 12, 2003, is acceptable.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12-19 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. Patent 5,777,765 to Deloddere et al. Deloddere et al discloses an optical delaying unit which is designed to, inter alia, emulate an optical fiber by simulating the delay and attenuation that an optical signal would have within the optical fiber. Although the word "digital" is not used in the reference, the Deloddere et al unit operates on binary communication signals and is therefore clearly a digital device. The person of ordinary skill in the art would obviously have recognized that the optical signal received by the Deloddere et al unit and the electrical signal to which it is transformed are digitally-encoded signals, having transmission codes and data codes of particular lengths. Other than this non-stated feature, the method described by Deloddere et al is essentially the same as the emulation method being claimed. The optical signal is received, transformed to an electrical signal, and delayed for a predetermined time. The electrical signal is then reconverted to an optical signal which has been delayed by the information transfer time of an optical fiber to be emulated. Notice that serial/parallel converters comprise a part of the

Application/Control Number: 09/852,719

Art Unit: 2874

Deloddere et al delaying unit. The choice of specific values for the lengths of the transmission codes and data codes of the digitally-encoded signals in Deloddere et al would certainly have been obvious to the person of ordinary skill in the art.

Claims 1-11 are allowed. As pointed out in the previous Office action, these claims are patentably distinct from Deloddere et al and all other prior art of record because an optical fiber emulator comprising an optical *demodulator*, a digital shift register, and an optical *modulator*, as specified in these claims, is neither disclosed nor suggested.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,812,530 to Fernandez et al shows a binary network emulator which utilizes an optical delay line.

Applicant's arguments filed May 12, 2003, with respect to claims 12-19, have been fully considered but they are not deemed to be persuasive. Applicant argues that Deloddere et al is different from the claimed emulator in that the reference samples the *amplitude* of the electrical signal produced from the input optical signal in order to produce a digital word representative of the *amplitude* of the sample. This means, according to applicant, that the signals are always treated as if they were analog signals. The Examiner has diligently read and studied the Deloddere et al reference and cannot find the basis for appl;icant's allegation. In fact, the word *amplitude* is not even mentioned in the reference. It remains the Examiner's position that the electrical word or signal produced in Deloddere et al has a digital code corresponding to, or based on, the code of the input digital optical signal. The argument is not persuasive and the previously applied rejection is maintained.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR § 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and an advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR §

1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this

final action.

Any inquiry concerning the merits of this communication should be directed to Examiner

John D. Lee at telephone number (703) 308-4886. The Examiner's normal work schedule is

Tuesday through Friday, 6:30 AM to 5:00 PM. Any inquiry of a general or clerical nature (i.e. a

request for a missing form or paper, etc.) should be directed to the Technology Center 2800

receptionist at telephone number (703) 308-0956, to the technical support staff supervisor (Team

2) at telephone number (703) 308-3072, or to the Technology Center 2800 Customer Service

Office at telephone number (703) 306-3329.
